

INSTALLATION

Basin bottle trap

Assemble ring (b) onto the short tube (c) under the top flange with the wide end facing upwards to receive the waste assembly. Slide the second ring (d) onto the short tube (c) ensuring the wide end is facing down.

Push the plastic sleeve (e) into the top of the bottle trap main body (f) ensuring the lip seats on the neck of the trap. Insert the short tube (c) into the centre of the plastic sleeve and lock the ring (d) firmly into position.

This trap is designed to connect to a standard 1.1/4" metal waist outlet pipe (i). Slide ring (h) and tapered washer (g) over the waste pipe and tighten the ring.

When fitted on the basin waste outlet the washer (a) must be placed inside the ring to form a seal between the trap and waste.
